RClamp7534F
Low Capacitance TVS for LVDS Interfaces

PROTECTION PRODUCTS - RailClamp®

Description

RailClamp® TVS diode arrays are specifically designed to protect sensitive components which are connected to high-speed data and transmission lines from over-voltage caused by **ESD** (electrostatic discharge), **CDE** (Cable Discharge Events), and **EFT** (electrical fast transients).

The unique design incorporates surge rated, low capacitance steering diodes and a TVS diode in a single package. This allows the device to absorb large amounts of energy while protecting downstream components from harmful transient events.

The RClamp7534F is in a 6-pin SC-70 package. The leads are finished with lead-free matte tin. They may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 (15kV air, 8kV contact discharge). The combination of small size, low capacitance, and high ESD surge capability makes them ideal for use in applications such as next generation color LCD displays and LVDS interfaces.

Features

- Transient protection for high-speed data lines to **IEC 61000-4-2 (ESD) ±15kV (air), ±8kV (contact) IEC 61000-4-4 (EFT) 40A (5/50ns)**
- Array of surge rated diodes with internal TVS Diode
- Small package saves board space
- Protects up to four I/O lines
- Low capacitance **(<3pF)** for high-speed interfaces
- No insertion loss to **2.0GHz**
- Low leakage current and clamping voltage
- Low operating voltage: 5.0V
- Solid-state silicon-avalanche technology

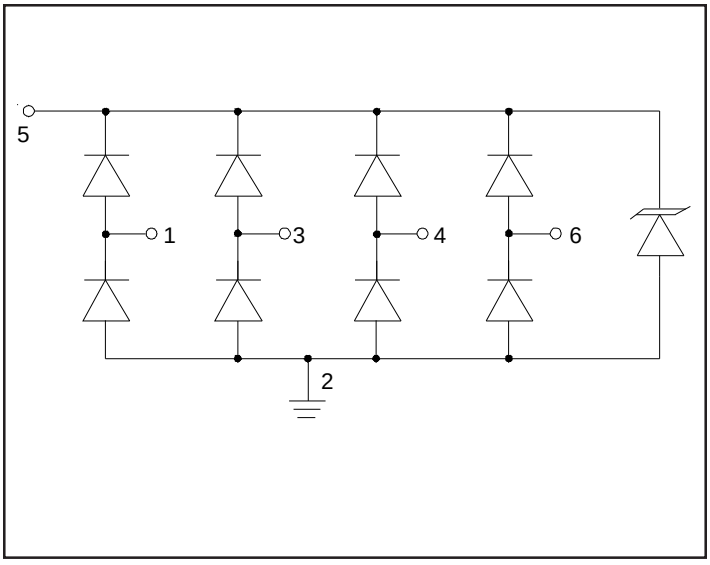

Mechanical Characteristics

- EIAJ SC-70 6L package
- Pb-Free, Halogen Free, RoHS/WEEE Compliant
- Nominal Dimensions: 2.0 x 1.25 x 1.1 mm
- Lead Finish: Matte Sn
- Molding compound flammability rating: UL 94V-0
- Marking : F75
- Packaging : Tape and Reel

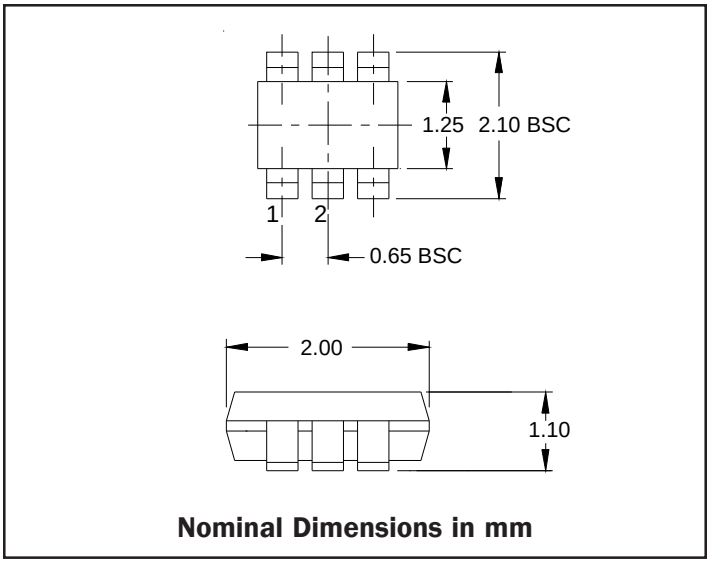

Applications

- LVDS Interfaces
- LCD TV

Applications Information

Device Connection Options for Protection of Four High-Speed Data Lines

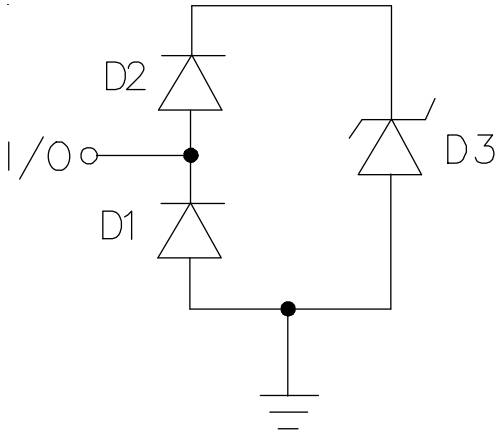

This device is designed to protect high-speed data lines. When the voltage on the protected line exceeds the breakdown voltage of the internal TVS diode, the steering diodes are forward biased, conducting the transient current away from the sensitive circuitry to ground.

Data lines are connected at pins 1, 3, 4 and 6. Pin 2 should be connected directly to a ground plane. The path length is kept as short as possible to minimize parasitic inductance. An external 10 Ohm resistor can be added as shown. This helps restrict the flow of ESD current further enhancing the circuit protection capability of the device. When configured as shown, a LVDS chip may withstand up to 10A for a 2/10 us impulse waveform.
