PRODUCT INFORMATION

Fork Sensors

SICK fork sensors: more models, more functionality

SICK
Sensor Intelligence.

Instantly correct

SICK fork sensors operate using the through-beam design. Time-consuming alignment is not necessary since the sender and receiver are combined in the same housing. SICK fork sensors have two principles of operation.

Optical fork sensors

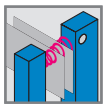

Optical fork sensors detect objects via the interruption of the light beam. Even small differences in light absorption can be reliably detected.

Fields of application

- Label recognition
- Counting and positioning objects
- Process control

Ultrasonic fork sensors

Ultrasonic fork sensors reliably evaluate and detect the material properties (e.g., thickness, adhesion) of an object, rather than its translucency. Thicker materials absorb the sensor's ultrasound better than thin materials. Transparent labels can be detected even on clear backer material.

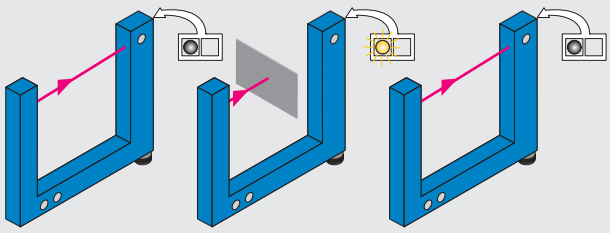

Fields of application

- Label recognition
- Double sheet detection
- Adhesive surface detection

Switching function

Switching output Q = dark switching

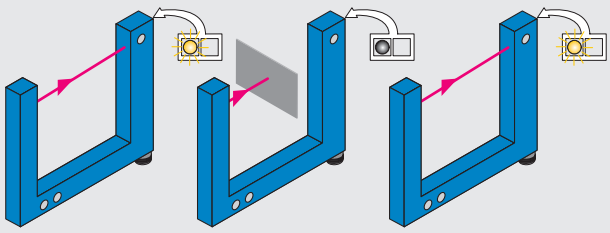

- The switching output is active when the beam path is interrupted, i.e., when there is an object in the beam path

In label recognition, this status corresponds to:
Switching output active on the label.

Switching output $\bar{Q}$ = light switching

- The switching output is active when there is no object in the beam path

In label recognition, this status corresponds to:
Switching output active in a label gap.

Label or double sheet detection

Transparent, shiny, and metallic labels; white, opaque and colored material; thin foils, foil on foil, paper on paper – modern labeling machines are confronted with a variety of materials and surface conditions. SICK fork sensors always offer the right solution. Optical fork sensors can be used for the reliable detection of opaque labels. Ultrasonic fork sensors reliably detect even on clear backer material.

Checking presence of objects on conveyor belts

To control various logistical processes, it is necessary to reliably detect certain objects on the conveyor belts. As soon as an object passes the fork sensor, the object is detected. Due to different transmission sources and sizes, SICK's wide range of fork sensors are able to meet nearly any application requirement. In accordance with the design, the sender and receiver are located in the same housing. And, since no complex, time-consuming alignment is needed, mounting and commissioning are quick and easy.

UF – The clear choice for detecting transparent labels

Product description

The UF ultrasonic sensors reliably detects labels and materials, regardless of printed design, transparency or surface characteristics. Unlike optical sensors, the UF relies on damping – a process where the thickness of a material determines the degree to which the sensor absorbs sound waves. A high level of positioning accuracy and stable response times make the fork sensor suitable for nearly any environment. Due to its small, compact metal housing, the UF can be used in harsh conditions and where space is limited. As a result, the UF can distinguish between labels located just 2 mm apart from one another on an adhesive tape. Applications include detecting transparent labels on transparent substrates, detecting labels with different printed designs or differentiating between single- and two-ply materials.

At a glance

- Detection of transparent, opaque or printed labels
- Unaffected by metallic foils and labels
- Fast response time of 250 µs
- Simple and accurate adjustment via "+"/"–"-buttons or teach-in
- Rugged, IP 65 aluminum housing

Your benefits

- Reliable label detection, regardless if labels are transparent, opaque or have a printed design, ensuring greater flexibility with one sensor
- Fast response times enable precise detection – even at high web speeds
- The aluminum housing meets all requirements for use in harsh industrial conditions
- Setting the switching threshold using the +/- push buttons or teach-in
- Ultrasonic technology prevents false detection, which may be caused by ambient light or shiny surfaces

Setting the switching threshold via “+”/“–” buttons: UFN3

1. Position label or substrate in the active area of the fork sensor

Press both the “+” and “–” buttons together, hold > 1 s and than release the teach-in buttons. The red LED flashes.

2. Move multiple labels through the fork sensor

Press “–” button, teach-in process is finished.

Notes

Switching threshold adaptation:
Only, the first teach-in procedure after switching on is permanently stored. Teach-in can be repeated cyclically. Switching output also during teach-in active.

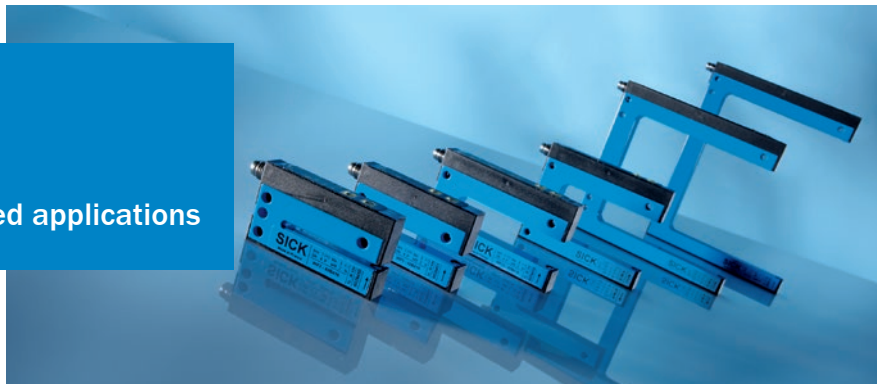

[+] [–] Once teach-in process is complete, the switching threshold can be adjusted at any time using the “+” or “–” button. To make minor adjustments, press the “+” or “–” button once. To configure settings quickly, keep the “+” or “–” button pressed for longer.

± 3s Press both the “+” and “–” buttons together (3 seconds) to lock the device and prevent unintentional actuation.

± 6s L/D Press both the “+” and “–” buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting: Q = light switching.

Teach-in (static): Setting the switching threshold without movements of label, cf. operating instruction.

WF*next* - it's next for high-speed applications

Product description

The WF*next* line is ideal for high-speed, accurate label detection. It includes more than 40 fork sensors with a large selection of fork widths and depths to fit any application, such as detecting labels, holes or double sheets. Since the sender and receiver are in one housing, adjustment is not necessary. This easy-to-use sensor line includes fork widths between 2 mm and 120 mm with fork depths of 40 mm, 60 mm and 95 mm. Its fast response time and fine resolution make it possible to detect small and flat objects moving at high speeds. On multiple installations, WF*next* sensors can be installed adjacent to one another with no cross talk.

At a glance

- Infrared light source
- Simple and accurate adjustment via teach-in or manually via "+"/"–" buttons
- Fast response time (max. 100 µs)
- PNP and NPN switching output
- Light/dark switching function
- 21 different models with different fork widths and depths
- Rugged, IP 65 aluminum housing

Your benefits

- Fast response time and fine resolution ensure reliable detection even at high speeds
- Infrared light source provides excellent ambient light immunity
- User friendly setting via teach-in or "+"/"–" button
- A wide range of different fork sizes enables flexible installation
- The aluminum housing meets all requirements for use in harsh industrial conditions

Setting the switching threshold via “+”/“–” buttons (WFxx-B410)

1. No object in the beam path

The yellow function indicator illuminates when the light received is at its optimum level.
If necessary, increase sensitivity using the “+” button.

2. Object in the beam path

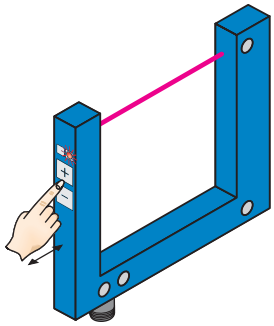

Yellow function indicator goes out.
If necessary, reduce sensitivity using the “–” button.

Setting the switching threshold via teach-in (WFxx-B416)

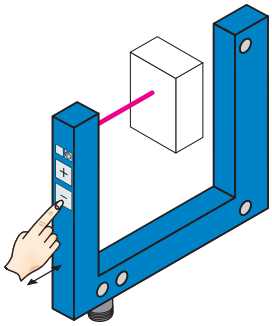

The switching threshold is set automatically. Fine adjustment is possible using the “+”/“–” buttons.

1. No object or substrate in the beam path

Press the “+” and “–” buttons together and hold for 1 second.
The red function indicator flashes slowly.

2. Object or label in the beam path

Press the “–” button for 1 second.
Red function indicator goes out.

Notes

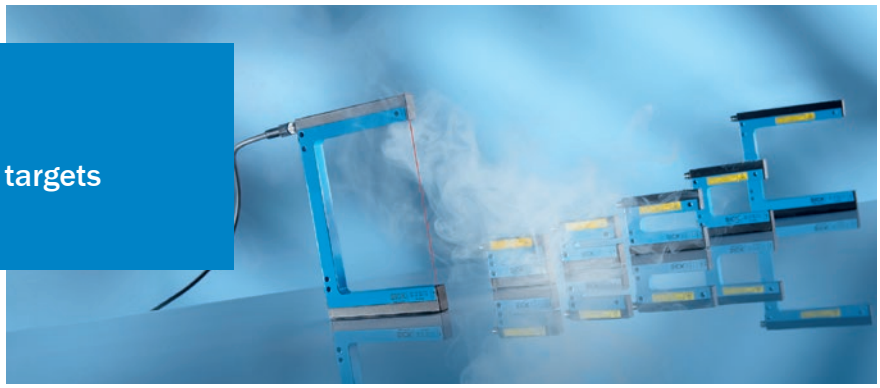

Material speed = 0 (machine at a standstill).

+ / – Once teach-in process is complete, the switching threshold can be adjusted at any time using the “+” or “–” button. To make minor adjustments, press the “+” or “–” button once.
To configure settings quickly, keep the “+” or “–” button pressed for longer.

± 3s Press both the “+” and “–” buttons together (3 seconds) to lock the device and prevent unintentional actuation.

± L/D 6s Press both the “+” and “–” buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting: $\overline{Q}$ = light switching.

Get precise detection of small targets with WFL fork sensors

Product description

The WFL laser fork sensor family is characterized by fast response times and a highly focused visible laser beam. The sender and receiver, which operate using the through-beam principle, are combined in a single housing. This enables maximum positioning accuracy. Due to extremely fast response times and high resolutions, these sensors are ideal for detecting very small objects, such as needles, and transparent objects. With more than 20 sensors available, this line of fork sensors can be used for a wide variety of applications.

At a glance

- Very precise laser beam (Class 1 laser)
- Simple and accurate adjustment via teach-in
- Fast response time (max. 100 µs)
- Minimum detectable object size of 0.05 mm
- PNP and NPN switching output
- Light/dark switching function
- 21 different models with different fork widths and depths
- Rugged, IP 65 aluminum housing

Your benefits

- A highly precise laser beam ensures consistent measurement accuracy along the entire measuring range and reliable detection of the smallest objects
- A visible laser light spot enables easy alignment and fast adjustment
- Reliable and simple setting via teach-in ensures high process reliability
- A wide range of different fork sizes increases installation flexibility
- The aluminum housing meets all requirements for use in harsh industrial conditions

Setting the switching threshold via teach-in (WFxx-B416)

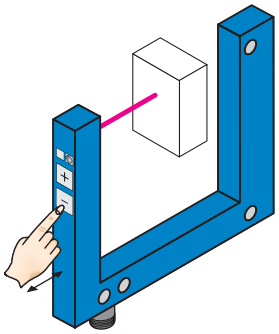

The switching threshold is set automatically. Fine adjustment is possible using the “+”/“–” buttons.

1. No object or substrate in the beam path

Press the “+” and “–” buttons together and hold for 1 second.
The red function indicator flashes slowly.

2. Object or label in the beam path

Press the “–” button for 1 second.
Red function indicator goes out.

Notes

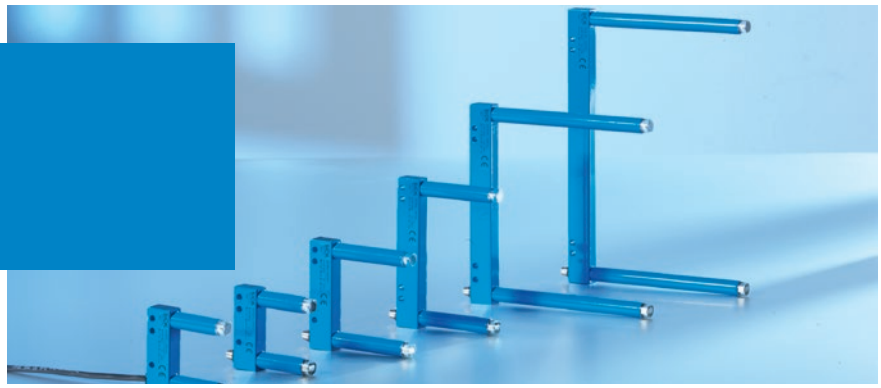

Material speed = 0 (machine at a standstill).

[+] [–] Once teach-in process is complete, the switching threshold can be adjusted at any time using the “+” or “–” button. To make minor adjustments, press the “+” or “–” button once. To configure settings quickly, keep the “+” or “–” button pressed for longer.

± 3s Press both the “+” and “–” buttons together (3 seconds) to lock the device and prevent unintentional actuation.

± L/D 6s Press both the “+” and “–” buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting: $\overline{Q}$ = light switching.

WFM fork sensors – connect and get started

Product description

WFM fork sensors can be integrated quickly due to Plug and Play installation – no time-consuming alignment is necessary. A 360-degree output indicator makes it easy to see the switching status during the operation. Since the sender and receiver of the sensor are integrated within the same aluminum housing, aligning the sensors is not necessary and detection tasks can be prepared and solved even faster. The WFM line includes five different types with fork widths from 30 to 180 mm and fork depths from 40 to 120 mm, providing greater application flexibility. This new generation of SICK fork sensors is suited for a variety of applications, such as detecting parts in production processes or checking presence when filling bottles.

At a glance

- Highly visible red emitted light
- No setup, out-of-the-box operation
- 360° output indicator
- 5 fork sizes:
  maximum depth 120 mm
  maximum width 180 mm
- Rugged, IP 67 aluminum housing

Your benefits

- Fixed housings guarantee a high level of operational safety with simple commissioning
- A visible red light enables easy alignment and fast adjustment
- The 360-degree yellow output indicator makes continual process control possible
- A wide range of different fork sizes increases installation flexibility
- The aluminum housing meets all requirements for use in harsh industrial conditions

Detailed technical data

Features

Functional principle	Optical detection principle
Light source	LED, red
Adjustment	None

Mechanics/electronics

Supply voltage V_S [1]	DC 10 V ... 30 V
Ripple [2]	< 10 %
Power consumption [3]	< 20 mA
Switching frequency [4]	4 kHz
Response time [5]	125 µs
Stability of response time	± 15 µs
Switching output voltage	PNP: HIGH = V_S – ≤ 1.5 V / LOW = 0 V NPN: HIGH = approx. V_S / LOW ≤ 1.5 V
Output current $I_{max.}$	100 mA
Initialization time	140 ms
Ambient light safety	Sunlight: 10,000 lx
Protection class [6]	III
Circuit protection	V_S connections reverse-polarity protected Output Q short-circuit protected Interference suppression
Enclosure rating	IP 67
Weight [7]	Approx. 80 g ... 190 g
Housing material	Aluminum

[1] Limit values, reverse-polarity protected. Operation in short-circuit protected network max. 8 A.

[2] May not exceed or fall short of V_S tolerances.

[3] Without load.

[4] With light/dark ratio 1:1.

[5] Signal transit time with resistive load.

[6] Reference voltage 50 V DC.

[7] Depending on fork width.

Ambient data

Ambient temperature [1]	Operation: –10 °C ... +60 °C Storage: –40 °C ... +80 °C
Shock load	According to IEC 60068

[1] Do not bend below 0 °C.

Agile and flexible – ideal mounting for labeling applications

Product description

The slim, forked shape of the WFS has been specially developed for the requirements of the labeling process. The design allows the sensor to be mounted directly on the edge of the dispenser.

Difficulty in detecting the label gap is finally eliminated – the sensor's switching threshold can be taught-in while the label strip is running.

The improved operating concept means the sensor can be adjusted to different labels quickly, easily and reliably.

The fast response time guarantees exceptional repeat accuracy.

At a glance

- Optimized housing with slim fork shape
- Dynamic teach-in via teach or control panel and manual fine adjustment with "+"/"–" buttons
- Light/dark switching function
- Fast response time of 50 µs
- PNP or NPN
- IP 65 plastic housing
- Switching output also during teach-in active

Your benefits

- Slim design allows flexible mounting close to the dispenser of the label which ensures higher accuracy in the process
- Compact housing ensures space-saving installation
- User-friendly adjustment allows easy and quick start-up
- External teach-in allows automatic threshold adjustment via the PLC during the process which ensures reliable detection all the time
- Short and fast response times enable precise detection – even at high web speeds

Setting the switching threshold via teach-in (dynamic)

1. Position label or substrate in the active area of the fork sensor

Press both the “+” and “–” buttons together, hold > 1 s and than release the teach-in buttons. The red LED flashes.

2. Move multiple labels through the fork sensor

Press “–” button, teach-in process is finished.

Notes

Switching threshold adaptation:
Only, the first teach-in procedure after switching on is permanently stored. Teach-in can be repeated cyclically. Switching output also during teach-in active.

+ / – Once teach-in process is complete, the switching threshold can be adjusted at any time using the “+” or “–” button. To make minor adjustments, press the “+” or “–” button once. To configure settings quickly, keep the “+” or “–” button pressed for longer.

± 3s Press both the “+” and “–” buttons together (3 seconds) to lock the device and prevent unintentional actuation.

± 6s L/D Press both the “+” and “–” buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting: Q = light switching.

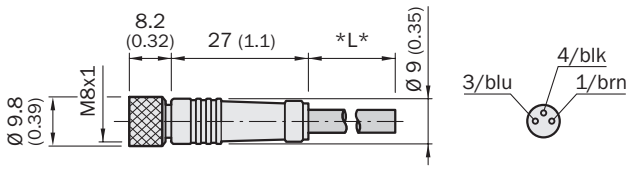

Teach-in (static): Setting the switching threshold without movements of label, cf. operating instruction.

For safety and productivity: SICK LifeTime Services

SICK LifeTime Services is a comprehensive set of high-quality services provided to support the entire life cycle of products and applications from system design all the way to upgrades. These services increase the safety of people, boost the productivity of machines and serve as the basis for our customers' sustainable business success.

Consulting & Design
Globally available experts for cost-effective solutions

Product & System Support
Fast and reliable, by telephone or on location

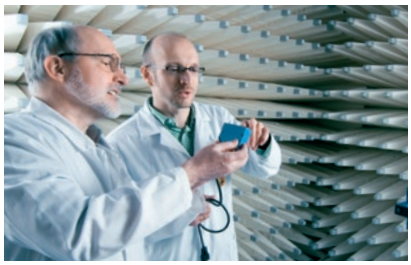

Verification & Optimization
Checks and recommendations for increased availability

Upgrade & Retrofits
Uncovers new potential for machines and systems

Training & Education
Employee qualification for increased competitiveness

SICK at a glance

Leading technologies

With a staff of more than 5,800 and nearly 50 subsidiaries and representations worldwide, SICK is one of the leading and most successful manufacturers of sensor technology. The power of innovation and solution competency have made SICK the global market leader. No matter what the project and industry may be, talking with an expert from SICK will provide you with an ideal basis for your plans – there is no need to settle for anything less than the best.

Unique product range

- Non-contact detecting, counting, classifying, positioning and measuring of any type of object or media
- Accident and operator protection with sensors, safety software and services
- Automatic identification with bar code and RFID readers
- Laser measurement technology for detecting the volume, position and contour of people and objects
- Complete system solutions for analysis and flow measurement of gases and liquids

Comprehensive services

- SICK LifeTime Services – for safety and productivity
- Application centers in Europe, Asia and North America for the development of system solutions under real-world conditions
- E-Business Partner Portal www.mysick.com – price and availability of products, requests for quotation and online orders
